

Systems under control. Results that last.

The approved Cypress Command identity.
Standards for consistent use.

Institutional authority. Modern systems thinking. Rooted durability.

Cypress	Moss	Amber	Charcoal	Bone
#1E4D3A	#2F6B4E	#D97706	#0A1F16	#F3EDE0

Primary identity

The rounded 04C mark, its isolated square, and the outlined wordmark form the fixed identity. Use the supplied master assets without redrawing or typesetting the logo.

Supporting design

Fraunces display type, Inter content and UI, the five-color palette, and quiet open framing are approved. This release supersedes earlier 04B and adoption-review packages.

One mark. Every setting.

The center square is part of the mark in every colorway. The horizontal and stacked lockups use identical icon geometry, with outlined wordmarks and protected space.

24px / 12.7mm

Standard icon minimum height. Use supplied 16px micro artwork below 24px; never remove the square.

The raster-derived master and its exact palette are approved. These coordinates define version 1.0. Minimums are production baselines; confirm print, material, and stitch proofs before fabrication.

260px / 65mm

Horizontal SVG export minimum width, including built-in clear space. Stacked: 180px / 45mm export width.

100% geometry

No stretch, stroke, shadow, gradient, or amber logo. Reverse both frame and core together for true one-color reproduction.

Authority without
the extra noise.

Systems under control.
Results that last.

Fraunces 450 / optical size 72, shown at 48px. Use it for editorial headlines and brand moments. Amber punctuation and italic emphasis are not required signature treatments.

Display Fraunces	A considered point of view.
Body and UI Inter	Clear records. Visible priorities. Deliberate decisions.
Identifiers only JetBrains Mono	[RECORD-001] 06 SEP 2026

Use a calm typographic hierarchy, clear alignment, and open-edge frames. Give the primary mark space. Structure must support content rather than compete with it.

Structure that supports the work.

Open-edge framing derived from 04D.
Not a second logo.

Role	Size / leading	Weight
Display	56 / 62	Fraunces 450
Section heading	36 / 43	Fraunces 450
UI heading	24 / 31	Inter 600
Body	16 / 25	Inter 400
Control / label	14 / 20	Inter 500
Record ID	12 / 18	Mono 400

The wordmark stays Montserrat-based outlined artwork. Fraunces and Inter form the approved content pairing. This replaces the earlier Playfair Display / Montserrat content typography.

A broad parent brand.

A clear name, a confident proposition, and room for real estate, operations, and systems. No invented performance metrics or certification badges.

[Our focus](#) [Contact](#)

Systems under control. Results that last.

Cypress Command brings structure to real estate, operations, and systems.

Explore our focus

Real estate

Built around durable assets.

Operations

Structure for daily execution.

Systems

Clarity across connected work.

The architectural mark is the hero. Real property and operator photography can replace this field after suitable images are supplied.
The ZIP's AI-generated property imagery is not presented as evidence of company assets.

Concept copy / for review

Useful before decorative.

Inter for decisions and data. Clear navigation, legible states, and calm surfaces. This example contains no connected accounts or operational data.

Signage

One-color cut or printed artwork. Determine size from viewing distance. No prebuilt gradients or simulated metal in the logo.

Field / vehicle

High-contrast decal. Preserve safety and equipment labels. Use the full lockup where people need to identify the company.

Apparel

One-color embroidery. 25mm icon minimum as a starting specification; require a stitch-out. Use a wide lockup only when lettering stays legible.

Consistent in use. Controlled at release.

Use the versioned master artwork, approved tokens, and supplied templates. Keep identity approval separate from content verification, deployment, and vendor proofs.

Identity

Use the primary horizontal lockup by default. Use the stacked version for narrow placements and the icon only where the brand is already clear.

Keep the core square, mark proportions, and clear space. All standard wordmarks are outlined.

Cypress and Bone dominate. Moss supports. Amber signals. Charcoal carries utility text and deep surfaces.

Keep 04D-derived framing subordinate to the logo.

Digital

Use local fonts and the supplied CSS / JSON tokens. Default display weight is Fraunces 450.

Use readable text, visible focus, and labels alongside status colors.

Social templates cover square, portrait, story, wide-banner, and preview-card formats.

The web starter and UI examples run locally. Real domains, content, accounts, and backends require separate setup.

Production

Supply vector masters to sign, print, apparel, and field vendors.

The business card uses 0.125 inch bleed and a 3.5 × 2 inch trim size. Keep contact details inside the safe area.

Require material/color samples and embroidery stitch-outs. Confirm helmet adhesive compatibility.

Use vendor-specific color profiles. Do not guess Pantone matches or universal CMYK values.

Release checklist

Identity approval is complete. Use the release kit as the current source. The following checks protect the work as it moves into live applications.

1. Replace every contact and project placeholder with verified information.

2. Check final output at actual size, on the intended background, with the correct logo variant.
3. Confirm copy, links, photography, metadata, and permissions before publishing.
Remove staging noindex only when ready.

4. Approve the vendor proof and material specification before ordering physical production.

Master record: approved by Adam Abdalla on 6 September 2026. Source artwork, font licenses, token definitions, asset inventory, and rollout notes are included. Open asset library W3C contrast guidance
